ABSTRACT:

PURPOSE: To make the correcting work of data information after a new power supply battery is loaded easy by preventing the clocking of the data information extremely different from the present time.

CONSTITUTION: This camera with a date function is equipped with a nonvolatile memory 2, a battery pulling out detecting means 6 detecting the fact that the power supply battery 3 is pulled out of the camera, a power supply backup means 4 backing up power supply to a dating circuit 7 for a specified time at the same time when the power supply battery 3 is pulled out of the camera, a date information writing means 1 writing the date information clocked on the dating circuit 7 in the nonvolatile memory 2 while the power supply is backed up by the power supply backup means 4, and moreover, a clocking operation control means, by detecting the fact that the power

supply battery 3 is loaded, to set the information written in the nonvolatile memory 2 as the initial value of the date information on the dating circuit 7 and then, to instruct the dating circuit 7 of a clocking operation from a time corresponding to the date information.
